Powerful, Easy to use, Presentation tool

Including a short-throw projector, a SMART interactive whiteboard and speakers, this is the ideal solution for any meeting room because it eliminates the need to purchase, install and manage separate hardware components.

The SMART interactive whiteboard system requires little training and start time is extremely quick. With the built in software you can make notes on any input without the use of a PC or Laptop. This means you can simply push one button and be ready to start your presentation. Once you have finished your presentation, notes can be stored on a USB key and emailed to your attendees.

Included with this system is the SMART interactive software. This provides a traditional notepad, ink aware, SMART recorder/player and other utilities such as an on-screen keyboard. All of these programs can be used with Microsoft Office programs and written notes can be saved.

Add-on options include Bridgit conferencing software enabling attendees from a remote location to be interactively involved in the presentation. Interactive response systems are also an option providing an easy but effective way to actively involve your audience during a presentation.

A full range of installation, training and support services are available. A pre-installation site survey is highly recommended.

If you would like more information or wish to discuss how it could fit within your organization please contact Oakford Technology on the details above.

Features

- 64" or 72" Interactive Whiteboard
